

Mini-Simposio SIF

Venerdì 6 maggio 2022 ore 14.30

urly.it/3n4ay

“The heterogeneity of endothelial signalling in multiple physiopathological contexts”

Organizers: Francesco Moccia (University of Pavia) and Luca Munaron (University of Torino)

14.30 Annarita Cantelmo, University of Lille, France

“Targeting endothelial cell plasticity in disease: role of mitochondrial calcium signaling and metabolism”

15.00 Federico Alessandro Ruffinatti, University of Turin

“Mining the transcriptional signature of the transcriptome in tumor endothelium”

15.30 Sharon Negri, University of Pavia

“Polymer-mediated optical excitation of intracellular Ca²⁺ signals in endothelial colony forming cells: the role of reactive oxygen species and Transient Receptor Potential Vanilloid 1”

16.00 Giulia Terribile, University of Milano-Bicocca

“Neurovascular unit dysfunctions in the onset and progression of neurodegeneration”
